

AUUP Sovereign AI // Personalized LLM

NVIDIA DGX-Powered Autonomous Institutional Reporting & Accreditation Engine

NVIDIA DGX ON-CAMPUS

0.00 KB CLOUD EGRESS

NAAC / NIRF / MDRF

In One Sentence: Powered by on-premise **NVIDIA DGX** compute, this system creates **AUUP's own personalized LLM** that transforms scattered campus data into audit-ready reports for **NAAC, NIRF, research, placements, and faculty profiles** — with 100% data security and zero cloud leakage.

1. THE CHALLENGE VS. THE DGX SOVEREIGN SOLUTION

✗ The Problem: Manual Reporting Nightmare

Every semester, universities struggle to compile hundreds of complex reports for statutory ranking bodies and internal committees:

- **Scattered Records:** Papers, patents, and grant letters buried across departmental drives.
- **Manual Compilation:** Months wasted copy-pasting into NAAC, NIRF & MDRF spreadsheets.
- **Discrepancies & Leaks:** Human math errors risk grades; public cloud AI leaks student data.

✓ The Fix: AUUP's Personalized Local LLM

An always-on institutional registrar and compliance auditor running natively on AUUP's on-campus NVIDIA DGX hardware:

- **Drop Any File:** CVs, PDFs, blueprints & spreadsheets are parsed and mapped automatically.
- **Proactive Audit:** Validates research against Scopus & cross-checks student-faculty ratios.
- **100% Air-Gapped:** Confidential salaries, student marks & patents never leave AUUP's campus.

2. FIVE CORE CAPABILITIES (WHAT IT ACTUALLY DOES)

Accreditation & Rankings

1-click generation of official dossiers for **NAAC SSR, NIRF & MDRF**. Formats quantitative data (QnM) and narratives (QIM).

Faculty Research Profiles

Extracts publications, Scopus citations, granted patents, funded projects, and API scores directly from **faculty CVs, PDFs & web data**.

Placements & Sports

Aggregates campus placement stats, athletic trophies, and extracurricular extension activities into verified institutional metrics.

Dynamic Template Engine

Supports custom templates for departments, committees, and ranking bodies—exporting to publication-ready **Word (.docx) & Excel (.xlsx)**.

100% DGX Data Security

The Critical Pillar: Complete sovereignty on local NVIDIA DGX. Zero third-party cloud egress—all institutional data remains private.

3. CONVERSATIONAL INTELLIGENCE: ASK ANYTHING IN NATURAL ENGLISH

ON-PREMISE DGX PROMPT ENGINE

Zero-Latency Sovereign Inference

"Extract research metrics from Dr. Sharma's CV"

AI extracts 14 Scopus papers, 2 granted patents, and ₹45L DST grant into faculty database.

"Draft NAAC Criterion 3.4 research dossier"

Compiles all 2024 indexed publications into an official NAAC Word table with verified DOI links.

"Check our NIRF 2025 student-faculty ratio"

Audits enrollment against active faculty list, flags 1:16.4 ratio, and verifies department compliance.

✗ BEFORE AUUP SOVEREIGN AI

50+ professors pulled from teaching, months of manual Excel compilation, panic when inspection teams ask for proofs, and severe cloud privacy risks.

✓ WITH AUUP SOVEREIGN AI

1 on-campus NVIDIA DGX engine, 5-minute automated dossiers, 100% verified proof backing, zero cloud leakage, and guaranteed top-tier accreditation readiness.
