

The Big Picture: Universities spend months compiling mountains of paperwork every semester for accreditation and ranking bodies. **ReportXpert** provides a dedicated, private AI assistant running directly on the university's own **on-premise NVIDIA DGX server**. It functions like an ultra-fast digital administrative specialist: reading messy faculty CVs, calculating statistics, checking for errors, and generating ready-to-submit official reports in **under 5 minutes** — completely offline, with zero risk of confidential data leaving the campus.

1. THE EVERYDAY ADMINISTRATIVE HEADACHE & THE FIX

X The Problem: Accreditation Nightmare

Every accreditation cycle (NAAC, NIRF, MDRF) brings regular campus academic work to a halt:

- Scattered Proofs:** Certificates, grant sanction letters, and student marks are trapped across separate paper folders and office cupboards.
- Spreadsheet Errors:** Manual data entry in Excel leads to formula errors, missed research papers, and lower accreditation rankings.
- Faculty Burnout:** 50+ senior professors are pulled away from teaching and research for months just to type tables by hand.

✓ The Fix: 24/7 Digital Administrative Specialist

ReportXpert works as an always-on institutional compliance specialist inside the university servers:

- Upload Any Document:** Instantly reads resumes, PDFs, scanned certificates, and Excel sheets without manual re-typing.
- Automatic Verification:** Cross-checks research papers against official citation databases (like Scopus) and audits student-to-faculty ratios.
- Ready-to-Submit Files:** Produces official, beautifully formatted Word documents and government-compliant Excel sheets in 1 click.

2. WHY "PERSONALIZED & PRIVATE" ON NVIDIA DGX IS THE CRITICAL PILLAR

🔒 100% Campus Privacy: Why Public Tools (Like ChatGPT) Cannot Be Used

Private On-Premise Server

Commercial tools like ChatGPT send every prompt and document to public cloud servers owned by third parties in other countries. Uploading confidential student marks, faculty salaries, or unpublished patent drafts exposes the university to data breaches and regulatory penalties. ReportXpert eliminates this risk completely:

1. On-Campus Hardware (NVIDIA DGX)

The AI lives and computes physically inside the university's own server room, controlled entirely by university staff.

2. Zero Cloud Leakage (100% Offline)

University data never leaves the campus network. No internet connection is needed for the AI to process records.

3. Simple Everyday Chat

Faculty and deans don't need coding skills. They just ask questions in normal, everyday English and get verified answers with proof.

3. THE INSTITUTIONAL TRANSFORMATION

ADMINISTRATIVE TASK	OLD MANUAL PROCESS (MONTHS OF STRESS)	WITH REPORTXPERT (FAST & AUTOMATED)
Faculty Time & Effort	50+ professors working late nights for 3 to 4 months	Completed in under 5 minutes by the on-campus AI
Publication Records	Manually chasing faculty for paper lists; missing citations	100% of papers, patents & grants automatically mapped from CVs
Inspection Readiness	Panic searching through filing cabinets during inspection visits	Instant digital audit trail with 1-click links to every original document
Data Protection	Risk of leaks from using public web tools or external vendors	100% confidential and secured on the university's internal server

1. FIVE CORE CAPABILITIES IN EVERYDAY ACTION

Faculty Profiles from CVs & PDFs

Auto-Profile

Upload any professor's resume (Word or PDF) or point to their web profile. The system automatically reads and categorizes:

- **Research publications:** Verified against recognized indexing databases like Scopus and Web of Science.
- **Government grants & approved patents:** Tracks DST, DBT, and CSIR research funding with sanctioned amounts.
- **Appraisal Points (API Scores):** Automatically tallies Academic Performance Indicator scores for annual promotions.

1-Click Accreditation Reports

NAAC / NIRF / MDRF

Inspection bodies demand both exact numbers and written explanations. ReportXpert prepares both:

- **NAAC Self-Study Report (All 7 Criteria):** Covers curriculum, teaching-learning, research, governance, and facilities.
- **NIRF & MDRF Rankings:** Calculates student-to-faculty ratios, graduation rates, research publications, and diversity scores.
- Produces complete numerical scorecards (QnM) and written descriptive answers (QIM).

Campus Achievements (Placements, Sports & Events)

Cross-Department

Gathers non-academic achievements across the entire institution so nothing gets left out of rankings:

- **Campus Placements:** Tracks salary packages, top recruiting companies, and student offer letters.
- **Sports & Cultural Honors:** Uses Vision AI to read event photos, trophies, and winner certificates.
- **Community Outreach:** Logs verified service hours for NSS, NCC, blood donation, and youth programs.

Official Multi-Format Reports (Word & Excel)

Word & Excel

Different ranking bodies and government committees require very specific file formats:

- **Official Word Reports (.docx):** Formatted with official university letterheads, tables of contents, and clean layouts.
- **Official Excel Workbooks (.xlsx):** Multi-tab spreadsheets matching exact government formats with zero formula errors.
- Eliminates tedious manual formatting, copy-pasting, and margin adjustments by office staff.

2. THE CONVERSATIONAL AI CONSOLE: ASK ANYTHING IN PLAIN ENGLISH

Everyday Questions University Leadership Can Ask

"Extract research metrics from Dr. Sharma's CV"

AI instantly extracts 18 indexed papers, 2 granted patents, and a ₹45L government grant into the faculty database.

"Compile the research dossier for NAAC accreditation"

AI compiles a ready-to-submit official table of all 2024 verified papers with titles, authors, and citation links.

"Check our current student-to-teacher ratio for NIRF"

AI cross-checks active student enrollments against faculty appointments, verifying a 1:16.2 ratio with proof.

3. THE DUAL-AI ENGINE POWERING THE SYSTEM

The Intelligent Coordinator (Natural Language Assistant)

Powered by local open models (Llama 3.2). Acts as the friendly conversational assistant: understands everyday plain-English questions from teachers and staff, searches records, and coordinates document creation.

The Strict Auditor (Deep Verification AI)

Powered by reasoning models (DeepSeek-R1). Acts as the rigorous quality auditor: cross-checks every calculation, spots missing proofs, flags data inconsistencies, and ensures complete statutory compliance.

Deployment: Private University Server Room (NVIDIA DGX AI Enclave)

Security: 100% Local Processing • Zero External Data Sharing
